PROFILE

CYBER**X** RANGERS

About Cyber X Rangers

CyberXRangers is a global leader in delivering advanced cybersecurity solutions designed to protect critical assets and sensitive infrastructure. Operating at the forefront of the cybersecurity industry, we adhere to international standards, empowering organizations worldwide to navigate evolving threats with confidence.

Our Vision

To be a globally recognized leader in cybersecurity, renowned for innovation, expertise, and excellence in securing the digital future.

Our Mission

To deliver innovative, scalable, and trusted cybersecurity solutions that:

Mitigate emerging threats.
Safeguard critical digital assets.
Enable businesses to thrive in an ever-evolving digital landscape.

Secure Your Way

Services

Red Services (Offensive Security)

- Penetration Testing – Comprehensive assessments using black-box, gray-box, and white-box techniques.

- Red Team Operations – Simulating adversarial tactics to test and strengthen defenses.

- Breach Assessment – Evaluating the potential impact of a breach and testing data recovery methods.

- Source Code Review – Analyzing code to identify vulnerabilities and security flaws.

- Vulnerability Assessments – Assessing and addressing potential security weaknesses.

Blue Services (Defensive Security)

- SOC Services – Real-time monitoring and incident management.

- Digital Forensics and Incident Response (DFIR) – Investigating and resolving security incidents.

- Proactive Threat Hunting – Identifying and neutralizing threats before they cause harm.

- Threat Intelligence Services – Providing actionable insights into emerging threats.

- Malware Analysis – Analyzing and neutralizing malicious software.

- SIEM Deployment – Implementing and managing SIEM, EDR, and XDR solutions.

- Firewall & IPS/IDS – Deploying and managing intrusion prevention and detection systems.

- Managed Detection and Response (MDR) – 24/7 monitoring and response services.

Consultation Services

- Virtual CISO (vCISO) Services – Providing strategic leadership in cybersecurity. Security Configuration and Hardening – Enhancing security configurations to mitigate risks.

- Vulnerability and Patch Management – Managing vulnerabilities and ensuring timely updates.

- Zero Trust Implementation – Designing and implementing zero trust security frameworks.

- Backup and Disaster Recovery Implementation – Establishing reliable data backup and recovery systems.

- Identity and Access Management – Ensuring secure access to systems and data.

- Training and Awareness – Delivering tailored training programs to improve security posture.
